

## Portfolios

---

I love architecture and graphic design. I have experience designing architectural presentation boards, 3D modeling, and conceptual designs, as well as, photo compilations, graphics, and print media. I am dedicated to finding creative solutions through design and art. I'm always on the lookout for exciting projects to work on. I believe that architecture is not simple buildings alone but distinctive statements of light and materials to evoke emotion. This passion combined with my skill in various software creates engaging artwork and informative presentations. When I'm not designing I'll probably reading about design or improving my software skills.

I have placed examples of my graphic work online for others to view on my Google+ account separated into Each Year of my Undergraduate and Graduate studies. Also you will find various works I have produced in my personal and professional career.

\*I will not put copies of construction documents online due to professional ethic. I do have a few examples of construction drawings that I have created that are available to view upon request.
